

ROAD TO COLOSSEUM • 2026

Fiducia

Controls how AI agents spend money.

Spending controls and escrow for AI agents, enforced on Solana.

fiducia-orpin.vercel.app

● Live on devnet

AI agents can find anything. *We still can't let them pay.*

Agent wallet

no cap

limit?

Overspending

An agent with a wallet has no limits.
One bad prompt, and the money is gone.

?

dataset.csv

Unverifiable goods

Who checks the dataset is real, or that
the seller delivers what they listed?

Approve 2.00 USDC

Approve 0.40 USDC

Approve 9.00 USDC

Human babysitting

Today a person approves every payment
by hand. That doesn't scale.

Built first for *teams that deploy research agents*.

FIRST CUSTOMER · FIRST VERTICAL

Small AI product teams and automation agencies whose research agents buy datasets, APIs, reports and expert work for clients.

ONE AGENCY, 10 CLIENTS

Its agents buy pricing feeds, company data and reports every week. Today: shared API keys, a company card, a spreadsheet at month end. **With Fiducia:** one mandate per client, approved sellers only, every stage signed off, every receipt on chain.

976,300

U.S. professional, scientific and technical services firms, the agencies and consultancies that bill research to clients

U.S. Census · 2022 Economic Census

\$4.0B

of services bought through Upwork alone in 2025: specialist work that agents will start buying

Upwork 10-K · FY2025 gross services volume

Who buys: the technical founder or lead developer.

Pain: someone answers to a client for every dollar an agent spends.

Need: spending limits, approved sellers, human checkpoints and a per-client audit trail.

Agents get a mandate, *not a wallet*.

SPECIMEN 01

MANDATE

Mandate

Total cap, per-payment cap, approved sellers, expiry. Enforced by the program.

`agent_spend`

SPECIMEN 02

APPROVAL

Stage approval

A human approves the exact plan hash before money moves.

`approve_stage`

SPECIMEN 03

ESCROW

Escrow

The team is paid only for the product hash that was delivered.

`submit_delivery → release`

Also in the marketplace: data escrow and pay-per-call APIs (x402).

Safe autonomy, *by design*

- 01 Own VM per agent, each team keeps its environment
- 02 On-chain mandate: cap, per-payment cap, payees, expiry
- 03 Stage gates: your approval is bound to the exact plan
- 04 One-click revoke; secrets never enter the VM
- 05 Paid only for the final product hash you saw

Demo agents are simulated today; Claude plugs into the same slots next. The safety layer is live.

Five steps. *Every one checked by Solana.*

The agent can't sign, approve or raise a cap. • No delivery, no payment.

What the chain *enforces*

RULE	ENFORCED BY
Agents spend only within their mandate	<code>agent_spend</code> checks caps, payees, stage, expiry
Nothing runs without your approval of that plan	<code>approve_stage</code> binds plan hash + mandate
Stop any agent instantly	<code>revoke_mandate</code> , one transaction
Spend within your daily budget and max price	<code>BuyerPolicy</code> in <code>create_deal</code>
Pay only for the exact data listed	<code>submit_delivery</code> = listing content hash
Grades come only from registered assessors	<code>attest_listing</code> + <code>AssessorRegistry</code>
No delivery, no payment	escrow + <code>timeout_refund</code> ; challenge → <code>resolve</code>
Reputation can't be wash-traded	<code>SellerRep</code> / <code>RepPair</code> : no score under 10 deals or 3 buyers

PROOF

92

program tests, incl.
randomized attack searches
against independent models

Deployed binary verified
byte for byte against the
committed build

Clean mission run on
devnet: `BJyjL2qc...1rSs`
explorer.solana.com/address/CfD43mq2...NVGSV

Checking every agent payment *only works*
when it costs almost nothing.

<1¢

per transaction, so pay-per-call and per-stage escrow are viable

1

public program checks every payment against its mandate

USDC

native stablecoin rails, plus x402 for agent payments

One real mission, *on chain*.

STEP	ON CHAIN	RESULT
Human approves stage 1 plan	approve_stage 5Nhc8QV...mNNH2o	APPROVED
Researcher tries 2.000001 USDC	OverPerTxCap : never lands	REFUSED
Researcher pays 1 USDC to the approved seller	agent_spend 2jLv1HdB...6HvjtmZ	FINALIZED
Human approves stage 2 plan	approve_stage 5Q8u4zSE...tUzEP4ix	APPROVED
Team delivers the product hash	submit_delivery 3swDEf2k...T6K6ApUU	DELIVERED
Buyer releases the team fee	release uKK7ggQs...ngubasE4	RELEASED

RESEARCHER

1.00 / 3.00

USDC spent

2 payment attempts, 1
refused by the chain

mandate 3.00 total • 2.00 per
payment • 1 payee

Simulated AI demo workers (deterministic, not a live model). Real Solana devnet transactions. Mission BJyjl2qc...1rSs.

Live on devnet. *Verified end to end.*

92

program tests

FLOW	WHAT HAPPENS ON CHAIN	STATUS
Hire a team	Mission and fee in one tx, mandates, 2 stage gates, payout	WORKING
Agents (MCP)	Find, buy, sell, release, challenge from any agent	WORKING
MCP hire_team	Claude Code calls Fiducia's MCP <code>hire_team</code> , gets a human approval link	WORKING
Sell	Graded, priced, signed in Phantom; custody and attestation	WORKING
Buy data	Budget, escrow, delivery, sealed key, release	WORKING
Pay per call	x402 in USDC; no answer, no charge	WORKING

Go to market *where agent builders already work.*

- 1 Ship Fiducia as an MCP server for Claude Code and other agent tools: one install, 17 tools.
- 2 Ready-made mandate templates and 30 seeded listings for research procurement.
- 3 5 design-partner research and automation agencies by December 2026.
- 4 Then coding, booking and commerce agents on the same mandates.

WHY NOW • EXTERNAL DATA

33%

of enterprise apps to include agentic AI by 2028, from under 1% in 2024

Gartner

40%+

of agentic AI projects to be cancelled by 2027, citing cost and risk controls

Gartner

87%

of developers worried about AI agents' accuracy; 81% about security

Stack Overflow 2025

DESIGN-PARTNER FUNNEL • TARGETS

200 builders reached

interviews, posts

60 MCP installs

20 first missions

5 partners

weekly use • 50 missions

REVENUE

The model we're testing: a small fee on every settled mission and agent payment.

A small fee on *every settled payment*.

SANDBOX

\$0

Devnet, test USDC, MCP and demo missions.

BUILDER

1.5%

of settled agent spend. No monthly fee. Sellers pay nothing.

AGENCY

\$149_{/mo}

+ 1% of spend. Client workspaces, templates, per-client export.

ONE AGENCY • ASSUMPTIONS

10 clients × \$400 governed spend = \$4,000 / month

\$149 + 1% fee = **\$189** revenue / month

≈ 600 Solana tx ≈ \$0.54 on-chain cost

A \$1 report by card loses 32.9% to fees; on Solana 0.09%.

NOW • LIVE

Devnet MVP

Mandates, stages, escrow, MCP. Simulated AI demo.

DEC 2026

Smart agents

Claude in agent slots,
5 design partners,
50 real missions

Q1 2027

Capped mainnet

Audit, multisig upgrades,
real USDC, 10 agencies,
first fee revenue

Q2 2027

Public launch, then expand

40 paying agencies by Q2 2027;
150 by Dec 2027 ≈ \$28k MRR.
Then coding, booking, commerce.

DEC 2027

Let agents spend. *Keep the control.*

WHO SIGNS

Buyers and sellers

Phantom wallet. Every money move is signed in their own wallet; our servers never hold user keys.

AI agents

Own keypairs via our MCP server. Agents can never approve stages or grant mandates.

Marketplace roles

Assessor attests listings; verifier rules challenges. Each has its own key.

One program: *deal_escrow* Anchor • Rust

Every payout goes through one `settle()` with a conservation check.

MONEY

USDC on SPL Token

Escrow vaults are token accounts owned by program PDAs. Funds move only by program rules: release, claim, refund, verifier ruling.

x402 pay-per-call

Agents pay USDC per API call on Solana. No answer, no charge.
